Income risk calculator

Date: 08 September 2020

Name: Chris Smith

Occupation: Architect (office)

01. Illness is the biggest risk to your financial security

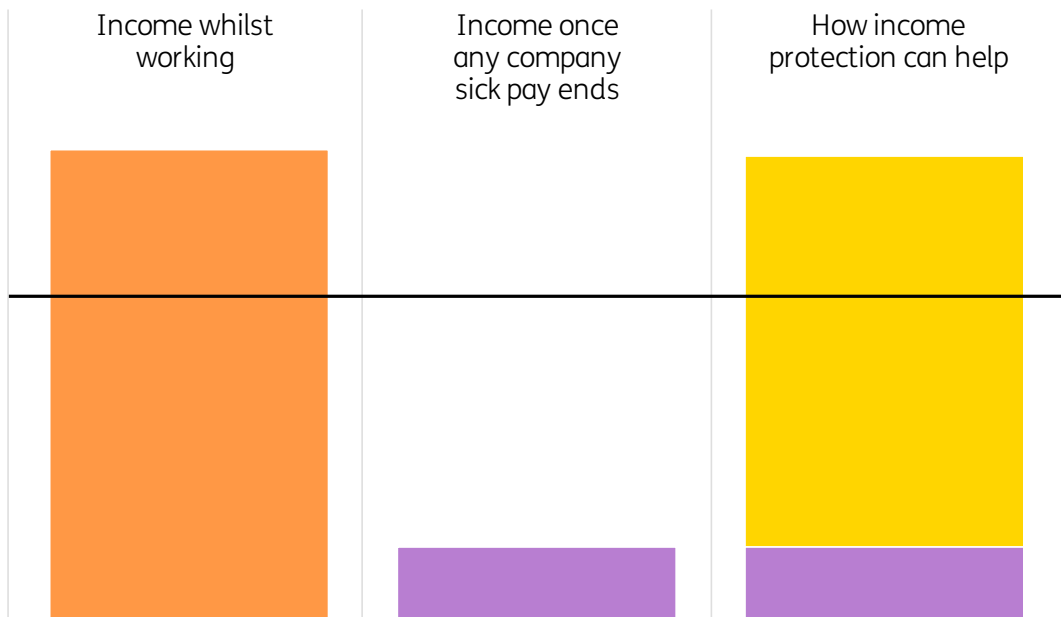

As you can see from the chart, throughout your working career the risk of a long-term illness is much greater than the risk of dying prematurely. That’s why a policy that pays out if you’re too ill to work is well worth considering.

Source: Data from the ©Continuous Mortality Investigation Limited

02. Income protection provides tax free income while you recover from illness

Think of income protection as gap insurance. It bridges the gap between your monthly outgoings and the minimal benefits you may receive if you're too ill to work.

— Monthly outgoings
£1,850

● Monthly income
£2,700

● Your Statutory Sick Pay
£415.35 per month for
6.5 months

● Max income protection
£2,250

Income protection provides you with up to **60%** of your monthly pre tax earnings of **£3,750**.

If you don't need as much as **60%** you can simply choose less.

To meet your monthly outgoings during the **6.5 months** you are entitled to Statutory Sick Pay, you require an additional income of:

£1,435 per month

(This is the equivalent to **38%** of your monthly salary before tax)

03. Income protection prevents illness leading to debt

If you're too ill to earn you may think you can just tighten your belt. But even if you just limit your spending to the essentials, debts can soon mount up. If your monthly expenses continue at **£1,850** your accumulated debt after any company sick pay ends could reach **£15,000** within 12 months.

Income shortfall after 12 months could reach £15,000

A note about your savings

If your outgoings continued at the current level, without income protection your hard-earned savings of **£10,000** would last just **23** weeks after any sick pay entitlement.

A note about sick pay

After paying any contractual sick leave your employer will only pay statutory sick pay of **£95.85** per week for **28** weeks.

A note about benefits

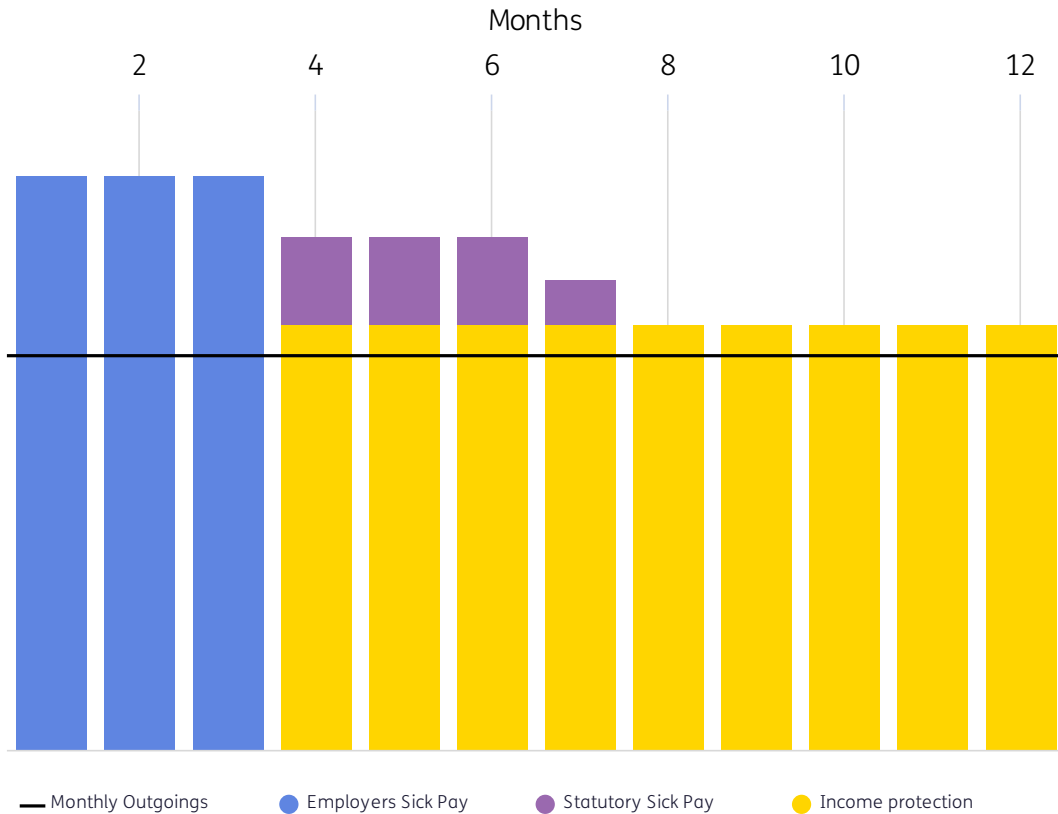

After statutory sick pay you'll receive minimal help from the government – and if you have over **£16,000** in savings you'll receive nothing.

It is possible that you will receive further state benefits from the Government after **28** weeks, however your entitlement depends on your personal circumstances.

04.

Having income protection makes all the difference

For as little as **£48** a month you can purchase an income protection policy, that will pay you **£2,000** per month after any company sick pay ends until the end of your claim period.

For **£48** per month (or **1%** of your monthly salary before tax) you can buy an income protection policy that pays out **£2,000** per month (or **53%** of your monthly salary before tax) whilst you are too ill to work. See part 6 of the report for more details.

05. Income protection covers all illnesses

Income protection pays out on any physical and mental illness and injury that prevents you from doing your job, not just any job. However, it's worth noting that any pre-existing medical conditions may be excluded. What's more, monthly payments continue until you recover, reach the end of your claim period or your policy term expires.

Most common causes of claims

The Exeter Claims Statistics 2019

60 WEEKS

% of claims paid:

91%

06. Policy options help keep premiums affordable

With any income protection policy there's a number of options that will help match your premiums to your budget.
